AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims, in the application.

LISTING OF CLAIMS:

1. (Original) A diagnostic composition for diagnosis and/or visualization of wounded or inflamed tissue or a disease associated therewith, comprising:

a microorganism or cell containing a DNA sequence encoding a detectable protein or a protein capable of inducing a detectable signal.

2. (Original) A pharmaceutical composition for the treatment of wounded or inflamed tissue or a disease associated therewith, comprising:

a microorganism or cell containing a DNA sequence encoding a detectable protein or a protein capable of inducing a detectable signal and at least one expressible DNA sequences encoding (a) protein(s) suitable for the therapy of wounded or inflamed tissue or a disease associated therewith.

- 3. (Original) The diagnostic composition according to claim 1, wherein the protein capable of inducing a detectable signal is a member selected from the group consisting of a luminescent and a fluorescent protein.
- 4. (Original) The pharmaceutical composition according to claim 2, wherein the protein capable of inducing a detectable signal is a member selected from the group consisting of a luminescent and a fluorescent protein.
- 5. (Original) The diagnostic composition according to claim 1, wherein the protein capable of inducing a detectable signal is a member selected from the group consisting of luciferase, RFP and GFP.

6. (Original) The pharmaceutical composition according to claim 2, wherein the protein capable of inducing a detectable signal is a member selected from the group consisting of luciferase, RFP and GFP.

- 7. (Original) The diagnostic composition according to claim 5, wherein the microorganism or cell additionally contains a gene encoding a substrate for a luciferase.
- 8. (Original) The pharmaceutical composition according to claim 6, wherein the microorganism or cell additionally contains a gene encoding a substrate for a luciferase.
- 9. (Original) The diagnostic composition according to claim 1, wherein the protein capable of inducing a detectable signal is a protein selected from the group consisting of: a protein that can induce a signal detectable by magnetic resonance imaging (MRI), a protein having the ability to bind a contrasting agent for visualization of tissue, a protein having the ability to bind a chromophore for visualization of tissue and a protein having the ability to bind to a ligand required for visualization of tissues.
- 10. (Original) The pharmaceutical composition according to claim 2, wherein the protein capable of inducing a detectable signal is a protein selected from the group consisting of: a protein that can induce a signal detectable by magnetic resonance imaging (MRI), a protein having the ability to bind a contrasting agent for visualization of tissue, a protein having the ability to bind a chromophore for visualization of tissue and a protein having the ability to bind to a ligand required for visualization of tissues.
- 11. (Original) The diagnostic composition according to claim 1, wherein the microorganism is a member selected from the group consisting of: a bacterium and a virus.
- 12. (Original) The pharmaceutical composition according to claim 2, wherein the microorganism is a member selected from the group consisting of: a bacterium and a virus.

13. (Original) The diagnostic composition according to claim 11, wherein the virus is Vaccinia virus.

- 14. (Original) The diagnostic composition according to claim 11, wherein the bacterium is a member selected from the group consisting of: an attenuated Salmonella thyphimurium, an attenuated Vibrio cholerae, an attenuated Listeria monocytogenes and E. coli.
- 15. (Original) The pharmaceutical composition according to claim 12, wherein the bacterium is a member selected from the group consisting of: an attenuated Salmonella thyphimurium, an attenuated Vibrio cholerae, an attenuated Listeria monocytogenes and E. coli.
- 16. (Original) The diagnostic composition according to claim 1, wherein the cell is a mammalian cell.
- 17. (Original) The pharmaceutical composition according to claim 2, wherein the cell is a mammalian cell.
- 18. (Original) The diagnostic composition according to claim 16, wherein the mammalian cell is selected from the group consisting of: an autologous and heterologous stem cell.
- 19. (Original) The pharmaceutical composition according to claim 17, wherein the mammalian cell is selected from the group consisting of: an autologous and heterologous stem cell.
- 20. (Original) The pharmaceutical composition according to claim 2, wherein the protein suitable for the therapy of wounded or inflamed tissue or a disease associated therewith is

selected from the group consisting of: an enzyme causing cell death and an enzyme causing the digestion of debris.

21. (Original) The diagnostic composition according to claim 1, wherein the disease is a member selected from the group consisting of: endocarditis, pericarditis, inflammatory bowel disease, low back pain (herniated nucleus pulposis), temporal arteritis, polyarteritis nodosa and an arthritic disease.

- 22. (Original) The pharmaceutical composition according to claim 2, wherein the disease is a member selected from the group consisting of: endocarditis, pericarditis, inflammatory bowel disease, low back pain (herniated nucleus pulposis), temporal arteritis, polyarteritis nodosa and an arthritic disease.
- 23. (Original) The diagnostic composition according to claim 1, wherein the disease is an atherosclerotic disease.
- 24. (Original) The pharmaceutical composition according to claim 2, wherein the disease is an atherosclerotic disease.
- 25. (Currently Amended) The diagnostic composition according to claim 1, wherein the disease is selected from the group consisting [[of;]] of: coronary artery disease, peripheral vascular disease and cerebral artery disease.
- 26. (Currently Amended) The pharmaceutical composition according to claim 2, wherein the disease is selected from the group consisting [[of;]] of: coronary artery disease, peripheral vascular disease and cerebral artery disease.
- 27. (Original) The diagnostic composition according to claim 1, wherein the diagnosis and/or visualization is carried out by MRI.

28. (Original) The pharmaceutical composition according to claim 2, wherein the diagnosis and/or visualization is carried out by MRI.

- 29. (Original) The pharmaceutical composition according to claim 2, wherein the expressible DNA sequences are on a BAC, MAC, cyber cell or cyber virus.
- 30. (Original) The diagnostic composition according to claim 1, wherein the DNA sequence is under the control of an inducible promoter.
 - 31. (Currently Amended) A method comprising comprising:
 - a) introducing the diagnostic composition according to claim 1 into a subject; and
- b) monitoring the diagnostic composition by a method selected from the group consisting of
 - i) monitoring the efficacy of an antibiotic regimen;
 - ii) evaluating the resistance of a suture to bacterial colonization; or
 - iii) evaluating the resistance of an implantable material to bacterial colonization.
- 32. (Currently Amended) A method for diagnosis and/or visualization of wounded or inflamed tissue or a disease associated therewith, the method comprising:
- a) introducing into a microoganism microorganism or cell a DNA sequence encoding a detectable protein or a protein capable of inducing a detectable signal;
 - b) introducing the microoganism microorganism or cell into a subject; and
- c) monitoring the detectable protein or a protein capable of inducing a detectable signal in the subject.
